

ASHLEY AN NORTON

CHARACTER, REVEALED OVER TIME

Our Dark Bronze (BZ) is a living patina applied to solid bronze, designed to evolve with time. Through touch, use and environment, the surface gradually reveals warmer, lighter tones in frequently handled areas—creating a distinctive patina that reveals the life of each piece.

ORIGINAL FINISH

Dark Bronze in its original state—deep, rich and beautifully nuanced.

BEGINNING TO EVOLVE

Approx. 6-12 Months

The first subtle signs of character emerge as frequently touched areas begin to reveal warmer, lighter tones.

NATURALLY AGED

Approx. 2-3 Years

With continued use, high-touch areas become softly burnished, creating an elegant interplay of light and dark.

TIME-HONORED PATINA

Approx. 5 Years

Years of touch reveal the natural bronze beneath, creating a richly layered surface with depth, warmth and character entirely its own.

The beauty of a living finish lies in its individuality. Patina will evolve uniquely according to environment, climate and frequency of use; no two pieces will age in precisely the same way.
